Allowable Subject Matter

1. Claims 1-25 are allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the cited references in combination with other limitations of claim teaches or suggests a method for reducing sparkle artifacts of a liquid crystal imager, that included: dividing a video signal for a picture into a higher brightness level signal and a lower brightness level signal, low pass filtering said lower brightness level signal; delaying said higher brightness level signal to match a processing delay incurred by said low pass filtering; and, **combining said low pass filtered lower brightness level signal, and said delay matched higher brightness level signal; applying said combined video signal to said imager**, as disclosed in claim 1. The closest art (Carlson et al., Deering and Okada et al.) disclose related methods, either singularly or in combination fail to anticipate or suggest these limitations obvious.

None of the cited references in combination with other limitations of claim teaches or suggests a circuit for reducing sparkle artifacts of a liquid crystal imager, that included: means for dividing a video signal for a picture into a higher brightness level signal and a lower brightness level signal, means for low pass filtering said lower brightness level signal; means for delaying said higher brightness level signal to match a processing delay incurred by said low pass filtering; **means for combining said low pass filtered lower brightness level signal to generate a modified video signal**, as disclosed in claim 11. The closest art (Carlson et al., Deering and Okada et al.)

disclose related methods, either singularly or in combination fail to anticipate or suggest these limitations obvious.

None of the cited references in combination with other limitations of claim teaches or suggests a circuit for reducing sparkle artifacts of a liquid crystal, that included: decomposer for dividing a video signal for a picture into a higher brightness level signal and a lower brightness level signal, a low pass filter for processing lower brightness level signal; delaying said higher brightness level signal to match a processing delay incurred by said low pass filtering; and, combining said low pass filtered lower brightness level signal, and said delay matched higher brightness level signal; an algebraic circuit for combining low pas filtered lower brightness level signal and delay matched higher brightness level signal and **generate modified video level signal** as disclosed in claim 21. The closest art (Carlson et al., Deering and Okada et al.) disclose related methods, either singularly or in combination fail to anticipate or suggest these limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
